

Nordson - Gardco gauge

Wet Film Thickness

ASTM D4414 Wet Film Thickness Measurement of Organic Coatings
ASTM D713 Wet Film Thickness Measurement of Traffic Paint

The Nordson-Gardco Wet Film Thickness gauge measures all types of wet coatings - paints, lacquers, enamels, adhesives - that are sprayed, dipped, or brushed on a smooth surface. The gauge makes it easy for anyone to obtain fast, highly accurate measurement on flat surfaces.

The gauge has four faces, each with a series of flat edges stepped back progressively in mil increments and fractions thereof. Coating thickness can be read directly by placing gauge on surface and noting the last and highest step touched by the film.
